Description

The fan holder for the CaliHeat improves heat transport into the pop-up roof by increasing the airflow speed.

Furthermore, the use of a fan enables better heat distribution and mixing of the air in the upper sleeping area.

To avoid draughts on the head and for perfect alignment, the fan holder is infinitely adjustable in the inclination and alignment of the outlet. The cable outlet is also infinitely adjustable and thus enables optimum cable routing.

The fan holder is supplied without a fan and without CaliHeat.

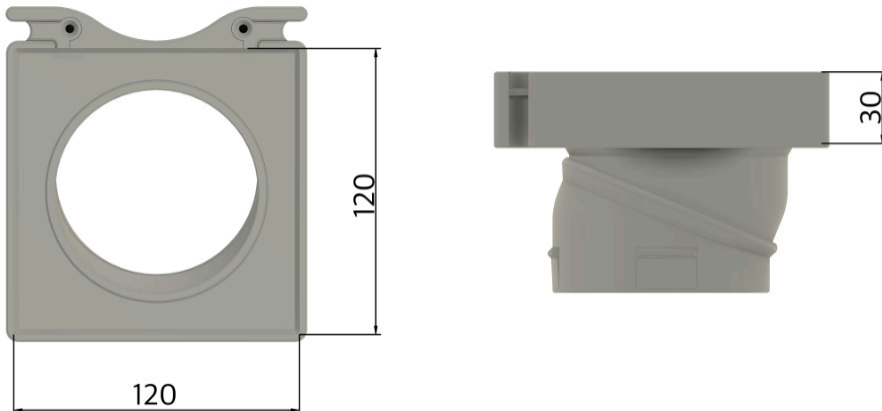

You will therefore need the CaliHeat set and a suitable fan.

USB fans have proven to be very useful, as they can be easily powered. Either directly via a USB socket or via a power bank.

Technical drawing

Technical drawing of the fan holder with the internal dimensions so that you can find the right fan for you. A fan with external dimensions of 120mm x 120mm x 30mm is required.

Installing the fan in the fan holder

Installing the fan Scan QR code (redirected to YouTube):
